

### Solar Energy Conversion –

In this position, the post-doc will work on photoelectrochemical, surface science and electron microscopic studies of a new set of materials toward solar energy conversion. The funding for this position is available for two years. The ideal candidate should have experience with semiconductor electrochemistry and photo-electrochemistry. This candidate will have an opportunity to work collaboratively with a national laboratory.

**Note:** The start date for this position is immediate. Interested candidates could send me a copy of their resume with a list of three references to me by e-mail (mahendra@louisville.edu). I could also be reached via phone at (502) 457-4178 (cell) if there are any questions.
